NITESH KUMAR

BHAGALPUR, BIHAR

+91-7992439381 niteshkrbgp9@gmail.com LinkedIn GitHub

Objective

Motivated and detail-oriented engineering graduate with a strong foundation in Artificial Intelligence, Machine Learning, and Computer Vision. Seeking an entry-level role where I can apply my technical skills, problem-solving ability, and passion for learning to contribute to innovative projects and organizational growth.

Education

Bihar Engineering University, Patna **07 2022 – 06 2026**
Bachelors of Technology in the branch of Computer Science Enggineering(AI) *CGPA: 8.53/10*

Technical Skills

- **Programming:** Python (Basic–Intermediate), C, C++
- **AI & Data:** Machine Learning fundamentals, Artificial intelligence, Basic Computer Vision
- **Manufacturing Applications:** Image-based defect detection, data monitoring, predictive analysis
- **Tools:** Jupyter Notebook, Google Colab, VS Code, GitHub

Experience

Jilo Health AI **Dec 2025 – Jan 2026**
AI- based solution for image-based disease diagnosis *Patna*

- Developed an AI-driven system to detect and classify diseases from medical images using Machine Learning and Deep Learning techniques.
- Performed image preprocessing and feature extraction to improve model performance and reliability.
- Evaluated and optimized the model using standard metrics such as accuracy and confusion matrix for effective disease prediction.

IIIT Bhagalpur **Jun 2025 – July 2025**
Tuberculsis Detection from Chest X-Rays Using Deep Learning Techniques *Bhagalpur*

- Developed a deep learning-based system to automatically detect tuberculosis from chest X-ray images, supporting early and accurate diagnosis.
- Preprocessed chest X-ray images using resizing, normalization, and noise reduction to improve model reliability.
- Designed and trained CNN-based models to classify X-ray images as tuberculosis-positive or normal.
  Evaluated model performance using accuracy, precision, recall, and confusion matrix.
- Gained hands-on experience with Python, TensorFlow/PyTorch, OpenCV, and medical image analysis workflows.

Projects

AI-Based Solution for Image-Based Disease Diagnosis | *Python, TensorFlow, PyTorch,OpenCV,Jupyter Notebook,.Git*

- I developed an AI-based system for disease diagnosis from medical images such as eye, face , nail using deep learning. I handled image preprocessing, model training, and performance evaluation, gaining hands-on experience in AI, machine learning, and computer vision
- Improved model efficiency through hyperparameter tuning and dataset optimization.

Tuberculosis Detection from Chest X-Rays Using Deep Learning Techniques | *Python,TensorFlow,PyTorch,OpenCV,Jupyt*

- Developed a deep learning-based system for tuberculosis detection from chest X-ray images. Applied image preprocessing, CNN-based classification, and model evaluation to achieve reliable diagnostic performance.

CNN-Based Potato Disease Classification Using PlantVillage Dataset | *Python,TensorFlow, PlantVillage Dataset, Jupyter*

- Developed a CNN-based model to classify potato diseases from leaf images using the PlantVillage dataset. Applied image preprocessing, model training, and performance evaluation to achieve accurate disease prediction.

|

Certifications

Certificate 1: AI- based solution for image-based disease diagnosis
Certificate 2 :Tuberculsis Detection from Chest X-Rays Using Deep Learning Techniques
Certificate 3 :NPTEL Course name Programming in Modern C++
Certificate 4 :NPTEL Course name Operating System
